

The 3-2-1 Mix

Same rings, second legend: where the 7-video batch aims. Two narrow buckets at Ring 2, one broad at Ring 4, one chaos dart. Tap a dart or a card for its revenue wiring.

STRATEGIC JOB

Conversion engine — claims the open claim-substantiation lane

WHY IT WORKS — THE MECHANISM

It converts because it prices a fear the buyer already carries — the FTC letter, the throttled ad — and shows the decision that removes it. Zero of 50 ranked rows compete for this ground.

EXAMPLE TOPICS

The \$53,088 sentence — what one over-claim costs a supplement brand

The claim ladder: say only what your proof carries

OFFER FED

Sprint, via the Angle Map

FUNNEL ROLE

Conversion

LEAD VALUE, BASIS STATED

~\$300 per qualified inquiry — list prices × stated close-rate assumptions; real rates land with the first ten sends

“WORKING =” — OBSERVABLE

≥2 DMs or comments per batch from operating founders that mention claims, launch, or proof

THE CALL — KILL, KEEP, PROMOTE

Below 2 across batches 2–3: swap in Launch Math. At ≥4: add a third weekly slot

THE TRAP THIS VIEW INVITES: Reading reach as the scoreboard. Reach and conversion point at different buckets by design; the “working =” unit on each card is the number that decides, in dollars, by batch 3. No verdict at 24 hours; no demotion before 2–3 batches.
