

The Bullseye

Rings by constraint relaxation. Tap a ring for its card: the one filter it drops, what it converts to, who is already there — and the warning that altitude earns.

THE BULLSEYE THE 3-2-1 MIX THE SOURCING MAP

TAP A RING FOR ITS CARD

Ring 1 · The center

NONE — THIS IS THE PERSON EVERY VIDEO SPEAKS TO

AUDIENCE

Formulator-founders and brand leads at already-selling supplement or performance brands, \$1M–\$15M, with a dated launch occasion inside 60–90 days

THIS RING'S JOB IN THE PLAN

The aim, never a lane. Every script greets this person in line one; his sentences supply the narrow buckets' best titles. He is also the buyer — the \$750 Angle Map and the \$2,500 Sprint both start as a DM to him.

RELATIVE AUDIENCE SIZE

A handful of named brands at any moment — small enough to greet by name, which is the point VERIFIED

CONVERSION PROXIMITY — HOW CLOSE TO A \$750 ANGLE MAP

A private teardown DM → the \$750 Angle Map

COMPETITION DENSITY — WHO IS ALREADY HERE

Nobody — a person you speak to, not a lane you publish in

Ring 1 is a person, not a content lane. Keep the brands already in your pipeline out of public content — named critique stays in the private teardown; public teardowns use dead brands and anonymized composites.

THE MOVE AT THIS RING

Write every script to him by name, and pull titles straight from his sentences — the \$30K lesson, compliant-and-still-throttled. Keep pipeline brands out of public content: named critique stays in the private teardown.

THE TRAP THIS VIEW INVITES: Reading Ring 5 as an audience. Its constraint column reads “everything,” which is exactly why it is a trap, not a tier: viral there teaches the algorithm to send more of the wrong people.

PRODUCED AUG 28, 2026 · EVIDENCE CURRENT AS OF AUG 27, 2026 · OUTLIER = N× THAT CHANNEL'S OWN NORMAL · LEAD VALUES USE LIST PRICES AND STATED CLOSE-RATE ASSUMPTIONS; REAL RATES LAND WITH THE FIRST TEN SENDS
