

PURAVITA · 12-FORM MAGNESIUM COMPLEX · TOP OF FUNNEL · META

# The Battery You Can't See.

*Your phone tells you when it's at 5%. Your body doesn't.*

One mineral runs hundreds of processes inside you. Sleep. Energy. Drive. Mood. Recovery. It's the one his blood test almost certainly missed. Not because the test didn't look. Because the test can only see 1% of where it lives. **Puravita is the recharge.**

| FORMAT                                      | STAGE                            | AWARENESS                               | STRATEGIST               |
|---------------------------------------------|----------------------------------|-----------------------------------------|--------------------------|

# Stop selling magnesium. *Sell the missing indicator.*

Every magnesium ad on Meta sells the same three things: better sleep, more energy, calmer nerves. The 45-year-old man who needs it most isn't typing "magnesium" into a search bar. He's typing **why do I feel like garbage**. So we meet him where he's actually asking. Not at the supplement aisle. In the 3am wake-up.

## THE BIG IDEA

### Your phone shows you when it's at 5%. Your body doesn't.

Every man over 40 has lived this scene. He slept eight hours. He ate clean. He didn't drink. He still feels like a low-grade flu. So he blames age. Then stress. Then his phone. He never thinks to blame a battery, because no one told him there is one. The battery is magnesium. When it's low, every system still reads "fine," and every system is also running at sixty percent. There's no warning light. There are only the symptoms. And the cruelest part is the test: a standard blood draw sees barely 1% of where magnesium lives. The result came back "normal." His body has been screaming for two years.

## WHY THIS WORKS FOR COLD TRAFFIC

### 01 It names what he's lived without language for.

"I'm doing everything right and I still feel like garbage" is the most common 40-plus male monologue on earth. This is the first ad that calls it by name instead of selling around it.

### 03 It moves him from "I'm just getting old" to "there's a fix."

Aging stories sell quiet resignation. The battery story sells a recharge. The category default is surrender, which is also why its cold traffic won't convert. We offer the opposite.

### 02 The phone-battery picture works on anyone who owns a phone.

A 45-year-old foreman lands it. A 55-year-old CFO lands it. A 38-year-old who's never bought a supplement lands it. The image crosses class, education, and geography. That breadth is what top-of-funnel needs.

### 04 The 1% blood-test fact is verifiable, and citing it is Meta-safe.

Serum magnesium really does reflect under 1% of total body stores. We're not making a health claim about the viewer. We're describing how a lab test works. That distinction keeps the ad live.

# The man who's been told he's fine. *Who knows he isn't.*

*He's not looking for magnesium. He's looking for an answer.*

| AGE                | GENDER                                 | INCOME                                    | GEO                                    | LIFESTYLE                                         |
|--------------------|----------------------------------------|-------------------------------------------|----------------------------------------|---------------------------------------------------|
| 38–62 · core 45–55 | Male primary · female 45+ in iteration | \$90K+ · disposable for "the right thing" | US broad · heavier midwest + southeast | Has a PCP · physical in last 12mo · "normal" labs |

## THE CONVERSATION ALREADY RUNNING IN HIS HEAD

"I'm 47. I sleep eight hours and wake up exhausted. I work out and feel weaker than I did a year ago. My wife asks if I'm okay and I don't have an answer. My doctor said the bloodwork looks fine. Everyone keeps telling me it's stress, or it's my age. But something is wrong. And nobody is taking it seriously."

He won't say this out loud, and especially not to his doctor a second time. He'll Google "why do I feel tired all the time" at 11pm. He'll watch a Huberman clip. He'll see our ad next. Name what he's feeling in the first six seconds, and he gives us the next thirty-nine.

## ENTRY · UNAWARE

He has the symptoms but blames age, stress, and bad sleep. He doesn't know magnesium deficiency exists as a category he could belong to.

## EXIT · PROBLEM-AWARE

By 0:45 he knows the battery metaphor, the 1% blood-test gap, and that one mineral runs hundreds of his systems. He isn't shopping brands yet. He's ready to click.

## CORE DESIRE WE'RE TARGETING

Ask him what he wants and he'll say better sleep. The honest answer sits a layer below: "I want to feel like myself again before my wife stops recognizing me." Pull the Puravita reviews and one phrase repeats: "my wife noticed." His deepest fear isn't fatigue. It's becoming someone his wife takes care of instead of partners with. We don't sell sleep. We sell return to self.

# Three facts the avatar doesn't know. *Each one rewires his story.*

## Fact 01 · The blood-test gap

Serum magnesium reflects **less than 1%** of total body magnesium, and serum is a poor predictor of true status. The other 99% lives in bone, muscle, and soft tissue. A man can be severely depleted and still test "normal." This is the foundational caveat in every clinical magnesium reference.

*NIH Office of Dietary Supplements, Magnesium fact sheet (Health Professional).*

## Fact 02 · The 600 processes

Magnesium is a cofactor in **over 600 enzymatic reactions** (up from the older 300-enzyme estimate). Muscle contraction. Neurotransmitter synthesis. ATP production. Magnesium doesn't assist these reactions. They don't happen without it. When the body is low, the systems don't fail outright. They just perform worse, which is exactly the symptom pattern the avatar is living.

*de Baaij, Hoenderop & Bindels, "Magnesium in Man," Physiological Reviews, 2015.*

## Fact 03 · The depletion curve

Nearly half of US adults, **about 48%**, ingest below the EAR (estimated average requirement), with the lowest intakes in men over 71 and adolescent males. Men 35-plus sit squarely on the curve. And refining whole wheat into white flour strips out roughly 80% of its magnesium, so the modern diet quietly removes it. This isn't a discipline problem. It's a food-supply problem.

*NIH ODS (intake / NHANES); USDA FoodData Central (grain-refining loss).*

### THE AUTHORITY WEAVE · COLD-TRAFFIC ANCHOR

**Dr. Andrew Huberman** recommends 145mg magnesium threonate, or 200mg magnesium bisglycinate, 30 to 60 minutes before sleep. **Dr. Peter Attia** says he aims for about a gram of elemental magnesium a day across several forms. The avatar has already heard the recommendation. He just hasn't acted on it. Our ad delivers the missing piece: the metaphor makes him feel why it matters, the science gives him permission to act, and the twelve-form Puravita formula goes further than the one or two forms the experts name.

### COMPLIANCE NOTE

Every claim above is structure-function: "magnesium supports the body's enzymatic processes." We never say "treats fatigue" or "cures insomnia." Aligned to Meta's long-standing Personal Attributes standard (last updated 2024).

# Five beats. Forty-five seconds. *Spoken words exactly as written.*

---

## BEAT 01 · HOOK

0:00–0:06

AI b-roll: close-up of a phone at 5%, red indicator pulsing, on a nightstand at 6:42am. Slow pull-back. A hand reaches in. We never see his face.

**"Your phone tells you when it's at 5 percent. Your body doesn't."**

Overlay 0:02–0:06 · "The battery your body forgot to warn you about."

---

## BEAT 02 · RESONANCE

0:06–0:16

Cut to HeyGen avatar (male, 45–50, weathered-handsome, soft kitchen light). Direct to camera. Quiet, almost conspiratorial. He's not selling. He's telling.

**"You sleep eight hours and wake up exhausted. You work out and feel weaker. Your wife asks if you're okay and you don't have an answer. Your bloodwork came back fine. You did not."**

Note · the resonance beat. Every line is his literal inner monologue. He won't blink for ten seconds.

---

## BEAT 03 · MECHANISM REVEAL

0:16–0:28

AI b-roll: a stylized body glowing softly. A label points to the blood ("1% · what the test sees"), then zooms out to the whole body ("99% · bone, muscle, tissue"). The glow fades to dim.

**"There's a mineral that runs hundreds of processes in your body. Sleep. Energy. Drive. Memory. It's almost certainly low. But your standard blood test sees about one percent of where it lives. The other ninety-nine percent, in bone and muscle, is what's actually depleted."**

Overlay 0:24–0:28 · "Source: NIH Office of Dietary Supplements"

---

## BEAT 04 · AUTHORITY DROP

0:28–0:36

Quick text card, subtle waveform (implies podcast). Back to the avatar.

**"Andrew Huberman recommends 145 milligrams of magnesium threonate before sleep. Peter Attia aims for about a gram a day. They're both right. They're also both talking about one or two forms. There are twelve. Each one feeds a different system."**

---

## BEAT 05 · REVEAL + SOFT CTA

0:36–0:45

Cut to Puravita bottle, warm kitchen light, twelve small molecule diagrams pulsing around it. Music drops to silence on the CTA.

**"Puravita is the only formula with all twelve. One capsule before bed. The link's below if you want to read what's in it. Up to you."**

---

# Everything the editor needs. *No follow-up questions.*

## HEYGEN AVATAR

**Type.** Male, 45 to 52. Lean to weathered-handsome, slight gray at the temples. NOT model-handsome. Relatable. HeyGen "Pro" library, natural micro-expressions.

**Wardrobe.** Henley or fine-knit sweater. Warm tones (oatmeal, sage, charcoal). No logos, no suit.

**Background.** Warm kitchen, morning light. Coffee off-focus on the counter. "Guy talking to camera," not "guy presenting."

**Voice.** Lower register. American. ~135 WPM. Slight gravitas. Closer to a podcast interview than an ad read.

## AI B-ROLL · THREE SEQUENCES

**01 · Phone-battery hook (0:00–0:06).** Veo 3.1 (primary) / Sora 2 Pro (fallback). Moody close-up, iPhone at 5%, soft red pulse, dawn light through blinds. Hand enters, never the face. Grade: deep-navy shadows, sage highlights.

**02 · Body-glow mechanism (0:16–0:28).** Nano Banana Pro stills + Kling 3.0 motion. Translucent silhouette, soft sage internal glow. Bloodstream first ("1%"), zoom out to the whole body ("99%"), then fade to dim. Painterly, not a medical chart.

**03 · Authority card + product (0:28–0:45).** After Effects. Huberman quote on frosted glass with a waveform, then the Puravita bottle, twelve molecules pulsing, soft CTA.

## tone & visual system

Deep navy. Soft sage-green accent, warmer than clinical teal. Warm amber reserved for the Huberman quote card only. Type: serif display for headlines (Source Serif 4 or Tiempos), clean sans for body (Inter Tight or Söhne). The whole piece should read like a *New York Times Magazine* science feature, not a supplement ad. Music: sparse, melancholy-then-resolving piano, sub-mixed at minus 18dB, dropping to silence on the soft CTA. The silence is the close.

## STATIC FALLBACK · ONE CARD FOR MIXED-FORMAT TESTING

**Top:** "Your phone shows you when it's at 5%." **Hero:** "Your body doesn't." **Bottom:** "The mineral that runs hundreds of processes in your body, and the test that misses 99% of it." **CTA:** Worth a look →. Editorial weight, no bottle, no "Buy now." A thumbstop test: does the metaphor alone earn the click?

# Specs, deliverables, *and the lines we won't cross.*

## TECHNICAL DELIVERABLES

**Primary.** 45s mini-VSL · HeyGen + AI b-roll · 9:16 · MP4 H.264 · 1080×1920 min.

**Secondary.** One editorial static · 1080×1350 (4:5) · the phone-battery / body card.

**Cutdowns.** 15s cut (Beats 01 + 03 + 05) · 6s hook-only thumbstop.

**Captions.** Burned-in, sans, bottom third, ≤6 words/frame, manual. No auto-captions.

**Music.** Sparse piano. -18dB sub-mix. Silence on the soft CTA.

**Grade.** Deep navy + sage. Magazine reference: NYT Magazine, The Atlantic, Wired covers.

## META H&W COMPLIANCE · WHAT THIS BRIEF HONORS

**No diagnosis claims.** Not "you have magnesium deficiency." We say "the body's magnesium stores are largely invisible to standard tests." Educational, not diagnostic.

**No personal-attribute hooks.** "You sleep eight hours and wake up exhausted" as a universal observation, never "are you tired?" Described from inside his experience, not by his condition.

**No before/after.** Anatomical glow metaphor, never body transformations.

**No timeframe promises.** If "6 to 8 weeks" appears, it's only because Puravita's own PDP cites it (94% report the change by week 8). Verifiable customer data, not a promise.

## DO NOT · FOR THE EDITOR

- Don't show a doctor in a white coat. Reads as an ad immediately.
- Don't show a literal anatomical diagram. Stylized glow only.
- Don't let the avatar smile through Beats 01 to 03. Restrained.
- Don't use stock "tired guy at a desk" footage. Stay in metaphor.
- Don't add urgency text ("Limited stock!"). Kills the editorial tone.
- Don't put a person next to the Huberman quote. Let the waveform carry it.

# If the control wins. *If it doesn't.*

Three iterations queued behind the control. Each holds the battery metaphor constant and tests a different lever. **This page is the strategy** — the control answers whether the picture lands; the iterations answer which lever moves it.

01 · PARTNER-NOTICED

"My wife noticed before I did."

Open on the partner-noticed beat instead of the phone battery. The PDP testimonials are saturated with this exact phrase, which suggests it may be even more universal than the metaphor.

02 · NATIVE ADVERTORIAL

"The mineral your blood test missed."

Re-cut as an 800-word native article. The science weave and the 1% reveal work even better in long-form. Higher-LTV avatars convert through native at materially better margins.

03 · FEMALE 45+

"My bloodwork looks fine. So why doesn't anything else?"

Female HeyGen avatar, same structure, perimenopausal symptom set in the resonance beat. Magnesium has a strong perimenopause story. Opens a major secondary segment.

KPI TARGETS · WEEK 1 TEST

| KPI             | WHAT IT DIAGNOSES                                                                                    | TARGET |
|-----------------|------------------------------------------------------------------------------------------------------|--------|
| Hook Rate       | Does "your phone tells you when it's at 5%" thumbstop?                                               | > 30%  |
| Hold Rate (15s) | Does the resonance beat hold past the 10-second drop-off cliff? The truth-teller for a level-1 play. | > 45%  |
| CTR (link)      | Does the soft CTA convert at the editorial-tone bar?                                                 | > 1.8% |
| CPA             | Business outcome vs. the \$49.99 90-day pack (a "buy 2, get 1" bundle; 30-day unit \$24.99).         | < \$45 |

WHY I'D SHIP THIS MONDAY

The avatar is Unaware moving to Problem-aware. Most magnesium ads on Meta are written for Solution-aware buyers ("best magnesium for sleep"). That copy concedes 80% of the market, because the viewer has to already know he needs magnesium for the ad to land. **This brief reaches the 80%.** The Hold Rate target above 45% is the truth-teller: if the resonance beat holds past the ten-second cliff, the level-1 bet is working, and Iteration 01 is queued the moment it doesn't.
